

# Dark Mode

Dark Mode changes the background color of your screen from light to dark and the print color from dark to white. This may have some advantages over the usual shade configuration of your screen. Dark mode may reduce eye strain in low-light conditions and probably conserves battery power more than the more common light mode. But mainly, dark mode is a preference. If you like it, use it. If not, don't.

## **To enter Dark Mode:**

Start (  ) > Settings (  ) > Personalization > Colors, scroll down to “Choose your color”. The default color will either be “Light” or “Custom”. Click on the drop down menu for “Choose your color” and select “Dark”.

## **To switch back:**

Start (  ) > Settings (  ) > Personalization > Colors, click on the drop down menu for “Choose your color” and select “Light” or “Custom”.
