

Drag to Pin Windows

Have you've ever wanted to have multiple windows open and have access to each of them at the same time? Heres how you can do it.

Open up to 4 windows that you wish to work with. Now grab any window by placing the mouse cursor in that windows title bar, click and hold the left mouse button and while holding the left mouse button move the cursor to one of the four corners on your screen. When you see a flash of light in the corner you have dragged the cursor to release the left mouse button and the window will decrease in size to fill that quarter of the screen. You can continue dragging each remaining window to the other corners in the same manner. To expand any window to full screen just click on the "Box" icon in the top right corner of the window you wish to expand.

You can accomplish the same effect by using the Windows key () + any of the arrow keys.
